

Crop-Tech Consulting's 2024 Virtual Winter College

Change Is The Name Of The Game:

This year's focus is giving growers the tools to make decisions in an ever changing environment and how to safely move into new practices without giving up productivity and ROI.

Tuesday,
January 9th

Starts: 8:00 AM Central

Is All Change Good

Game Changing Soybean Management

Identifying When Change is Needed

Lunch Break

Eliminating Below Ground Barriers

A "Change" Reaction

Changing How You Play
The Cover Crop Game

Q & A

Ends: 4:00 PM Central

Is All Change Good: Governmental regulations and incentive programs have farmers considering changes in their management strategies. Growers should be aware of pitfalls that can exist within each system before implementing change.

Game Changing Soybean Management: Understanding variety characteristics and how they interact with population, row spacing, and weed control is vital to successfully implementing an early planting change.

Identifying When Change is Needed: Helping growers identify impediments costing them yield and/or profitability and how to remove them. Using soil pits and root digs to identify below ground issues that may be costing yield.

Eliminating Below Ground Barriers: Participants will get to see what the tillage tools are doing above and below ground and get tips on how to set equipment to get the best results.

A "Change" Reaction: Making changes to your system: crop rotation, tillage systems, or nutrient placement, can have a big impact to your overall outcome. Often growers think of a change as a single decision, not realizing the impact on the rest of their system throughout the season.

Changing How You Play The Cover Crop Game: Understanding the implications of seedbed prep, types of cover, termination dates, pest management, and 4R's of nutrient management are all critical to implementing covers successfully.
